TEMCO

TEMCO is developing a supply chain platform based on RSK blockchain. Using blockchain technology, we connect isolated supply chain systems and offer data services. For companies, we provide a business intelligence tool to gain business insights. For consumers, we provide a consumer application to track supply chain data in real time and an online market platform with a crypto currency payment feature.

What is the Problem?

In the existing supply chain system, information is disconnected. As a result, consumers have doubts about product quality because they cannot access complete information. While companies invest heavily in their infrastructure, they still cannot use data effectively.

Why RSK

Bitcoin based Turing-complete smart contracts | Merge-mining & DÉCOR+ protocol | Support from Bitcoin community

We are building a total supply chain solution, deployed on RSK blockchain. RSK revolutionized Bitcoin ecosystem, the most stable blockchain network. They developed the first open-source smart contract platform with a 2-way peg to Bitcoin. RSK provides fast transaction speed, high scalability, and low transaction cost.

TEMCO's Business Solution

Business Intelligence Tool

TEMCO is developing a real-time business intelligence tool that categorizes and visualizes supply chain data captured in blockchain. Our tool is optimized for different industries. Using the tool, companies can make strategic decisions to improve business operation.

Consumer Application

TEMCO's consumer application is a link between consumers and companies. Using the application, consumers can easily track products' supply chain data and purchase them using cryptocurrencies. Consumers are more confident about product quality, and they can experience new type of payment system.
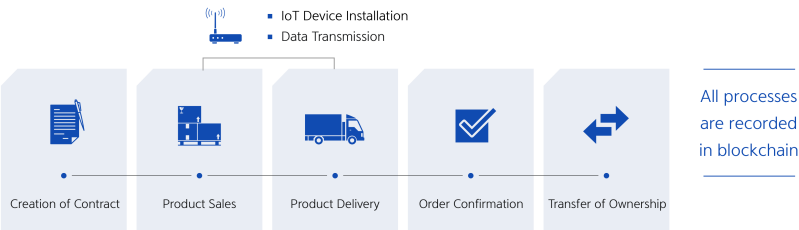

Big Data Service

Data captured through TEMCO's platform is massive in size and highly valuable because relevant information is connected together. They are processed through TEMCO's big data service and provided to businesses in the form of API and other convenient means.

RSK Blockchain Based Supply Chain

RSK's highly scalable and reliable smart contract platform elevates TEMCO's technology. Using blockchain, both companies and consumers can access real-time information such as production, transfer activities, distribution, order confirmation, ownership changes, etc. that are generated during the process.

Supply Chain Management with IoT

TEMCO utilizes IoT to track temperature and humidity of cold chain products in real time. Using RFID built with an ultra-low power semiconductor, we can capture accurate data and reduce human errors.

- IoT Device Installation
- Data Transmission

Creation of Contract — Product Sales — Product Delivery — Order Confirmation — Transfer of Ownership

All processes are recorded in blockchain

Real Use Case

Using TEMCO's platform, we successfully connected Nenia's supply chain from manufacturer to final consumer on blockchain. Through this, we proved that companies can depart from their existing systems and manage data effectively. On the consumer side, we proved that our platform can increase consumer confidence in product quality.

Advisors

Will O'Brien
Technical and Strategic Advisor

- CEO and Co-Founder of BitGo
- Limited partner of Blockchain Capital
- Investor, mentor and strategic advisor for early stage startups

Partners & Investors

DEBLOCK

Accelerator for blockchain projects launched by ICON Foundation and AD4th Insight

nenia

Eco-friendly organic food producer and retailer that promotes healthier lifestyle

BLOCKCHAIN

Accelerator for blockchain projects around the world to guide overseas expansion

Token Sale

Total Token Amount	10,000,000,000 TEMCO
Token Sale Amount	3,000,000,000 TEMCO
Token Price	120 TEMCO / USD
Hard Cap	25M USD
Accepting Currency	Bitcoin, Ethereum
White List Date	2018.10.15
ICO Date	TBD

10 billion TEMCO

- 10% Operation
- 9.5% Team & Advisor
- 10.5% Founder Hold
- 30% Token Sale
- 40% Product & Market Development

TEMCO CONNECTS VALUABLE PRODUCT DATA FROM POINT OF ORIGIN TO POINT OF CONSUMPTION
